Humane Care and Use of Animals Policy

Johnson & Johnson is committed to ensuring the ethical treatment of animals used in laboratory settings to advance patient safety and well-being. Johnson & Johnson operating companies have policies and guidelines in place that drive the ethical and humane treatment of the animals we use, and that promote the use of non-animal alternatives whenever feasible. We support and participate in efforts to obtain regulatory acceptance of alternative testing methods. Our standards for animal care and use are intended to meet or exceed all applicable regulations.

Our corporation is committed to the “3R” Principles

- Replacement – using alternative non-animal systems in place of live animal utilization whenever possible
- Reduction – using the minimum number of animals possible to achieve maximum information without compromising animal welfare
- Refinement – continually modifying procedures to limit the discomfort and distress to animals

Cosmetics

- Johnson & Johnson Consumer Health does not conduct animal testing in the research or development of our cosmetic products. We believe our cosmetic products can be validated as safe and effective without compromising animal welfare, but some countries still require animal testing data to meet their own regulatory requirements. As part of our ongoing commitment over the last 30 years, we continue to advance non-animal testing methods and support efforts to eliminate the testing of cosmetic products or ingredients on animals globally.

Institutional Animal Care and Use Committee (IACUC)/Ethical Review

- Proposed animal work must be reviewed and approved by an IACUC or an equivalent Ethical Committee(s).

Personnel Training – Competency

- Personnel involved with the care and use of animals must be educated, trained, and/or qualified in the principles of animal welfare and compliance to help ensure quality science and animal well-being.
Sourcing Animals and Tissue

- Live animals used in research and teaching shall be obtained from approved sources. Guidance is provided regarding appropriate sourcing of animal tissue.

Euthanasia

- Only humane and appropriate methods of euthanasia will be used, for example, those described in the American Veterinary Medical Association Guidelines for the Euthanasia of Animals and those established under the EU legislation on the protection of animals used for scientific purposes.

Teaching and Education

- Live animals should only be used when required to learn a medical or surgical procedure (including proper product usage) and where alternate non-animal models have been deemed inadequate for the purpose.
- We are committed to continually seeking ways to refine training requirements that yield additional reductions in the use of animals in testing.
- We do not use live animals in training sales associates.

Association for Assessment and Accreditation of Laboratory Animal Care International (AAALAC)

- At all points in time, we strive to ensure that all Johnson & Johnson animal facilities are accredited by AAALAC International.
  - Newly acquired non-accredited companies are expected to apply for accreditation and become accredited in a timely manner.

External Service Providers

- Johnson & Johnson expects the standards for animal care and use for external service providers to adhere to the standards described in this document.
  - Standards for animal care and use will meet or exceed applicable local and national laws and regulations.
  - Johnson & Johnson’s preference is to work with external service providers that are AAALAC accredited. In cases where non-accredited external service provider use is justified, established Johnson & Johnson procedures must be followed and complied with to ensure that such facilities meet Johnson & Johnson standards.

Consequences of Mistreatment

- Mistreatment of animals or failure to abide by this Policy is a serious violation and may be grounds for dismissal or termination of contracts with service providers.
