Introduction

Johnson & Johnson has a long-standing commitment to environmental stewardship, grounded in Our Credo, that reminds us that we must protect the environment and natural resources that we are privileged to use. This includes doing our part to curtail the unsustainable loss of the Earth’s natural forests.

Our Pursuit of Transparency & Traceability

Johnson & Johnson purchases cartons, corrugates and leaflets made from wood fiber as packaging for our products. Tracing the source of wood fiber used to make these products is challenging. Therefore, Johnson & Johnson began working with Rainforest Alliance in 2017 to provide us with the third-party expertise necessary to improve our supply chain transparency, to help deliver progress against our wood-fiber product sourcing commitments and to improve our supplier engagement process.

Our Progress

Johnson & Johnson is implementing our responsible sourcing commitments for the wood-fiber products we purchase. In total, our 2021 supply chain risk assessment accounted for approximately 99% of our global, direct spend on cartons, corrugates and leaflets and 134,231 MT of material.

In 2021, in collaboration with the Rainforest Alliance, we achieved the following:

- Organized trainings on our sourcing principles for our packaging procurement leads across the globe
- Hosted virtual workshops to engage our paper-based packaging suppliers on our wood-fiber product sourcing commitments
- Maintained the use of a third-party software platform to execute our supplier risk assessments
- Confirmed that approximately 99% of our directed-buy cartons, corrugates and leaflets volume was either transparent to country of origin or originating from recycled content
- Validated that 77% of our in-scope volume originates from low-risk sources, with 46% of our volume from chain-of-custody certified by either the Forest Stewardship Council (FSC) or The Programme for the Endorsement of Forest Certification (PEFC), or from 100% recycled content.
While our sourcing principles apply to all wood-fiber products that we buy, we take a risk-based approach to building transparency and to verifying conformance. We prioritize implementation of our sourcing principles with our largest cartons, corrugates and leaflets suppliers by spend.

**Supporting Transformational Change**

Alongside pursuing higher levels of transparency and implementing our wood-fiber product sourcing principles for the directed cartons, corrugates and leaflets volumes that we purchase, we also are committed to supporting efforts to address environmental and social issues associated with deforestation.

Collaboration is crucial to address these challenges and to create transformational change. Therefore, we invest in partnerships and projects within critical forest ecosystems across the globe, with a focus on initiatives that:

- Protect forests, biodiversity and human health
- Reduce greenhouse gas emissions
- Respect human rights and gender equality
- Support smallholder livelihood and inclusion
- Improve supply chain engagement and transparency

The below map outlines initiatives that we are supporting through partnerships. This work was active or initiated by year end 2021.
Our Path Forward

In 2021 we launched an updated Responsible Wood-Fiber Product Sourcing Policy, which includes new targets to enable continued progress toward responsible sourcing of the wood-fiber products we purchase.

We provide annual updates on our progress on JNJ.com.
