

We're working  
towards  
transforming  
care for patients  
with atrial  
fibrillation.

Atrial fibrillation is a common cardiac arrhythmia that can lead to blood clots, stroke, heart failure and other cardiovascular problems.<sup>1</sup>

---

Despite advances in antithrombotic treatment, the use of anticoagulation therapy is limited in individuals with a high risk of bleeding, leaving many atrial fibrillation patients at risk for stroke.<sup>3</sup>

According to 2019 global data,  
*an estimated*

**55.4 million**  
people are affected by  
atrial fibrillation.<sup>2</sup>

---

Individuals with atrial fibrillation have a

**4- to 5-fold  
higher risk**  
of stroke compared to  
the general population.<sup>4</sup>

**Johnson&Johnson**
